PROFESSIONAL SUMMARY

Software Engineer with 1+ year of experience designing and developing **high-performance, scalable, repeatable, and secure software components** for **enterprise-scale distributed systems** using **open-source technologies**. Demonstrates proficiency in C# (.NET Core), RESTful API design, GraphQL (HotChocolate), React.js, and cloud-native development on AWS. Experienced in **agile practices, code review and design review, functional integration and regression testing, CI/CD automation, change and incident management**, and **disaster recovery planning**. Understands concepts of **distributed programming**, applies different data structures, and continuously builds upon domain-specific knowledge. Actively resolves technical issues and **monitors system capacity** with minimal oversight. Passionate about software quality, total cost of ownership, and evaluation of new and emerging technologies.

TECHNICAL SKILLS

Languages & Frameworks: C# · .NET Core · ASP.NET Core · GraphQL (HotChocolate) · React.js · Spring Boot (familiar) · Kotlin (familiar)

Open-Source Backend: RESTful APIs · PostgreSQL · Redis · EF Core · JWT · RBAC · MSTest · Moq · Git · Linux · Postman

Cloud & Infrastructure: AWS (EC2, S3, DynamoDB, IAM, Kinesis) · Azure Blob Storage · Google Cloud Storage · Nginx · AWS Certified Cloud Practitioner

Containerization & CI/CD: Docker · Kubernetes (Pods, Deployments, Services) · GitHub Actions · Bash Scripting · SSH-based Auto Deployment

Engineering Practices: Agile · Code Review · Design Review · Functional & Regression Testing · Test Automation · Disaster Recovery · Change & Incident Management · Distributed Systems · Data Structures · System Capacity Monitoring

Monitoring & Debugging: Structured Logging (LoggerMessage) · Container Debugging · Log Analysis · YAML Troubleshooting · Pipeline Failure Resolution · Cloud Observability

PROFESSIONAL EXPERIENCE

Software Engineer | L&T Technology Services | Mysore, Karnataka

Dec 2024 – Present

Philips – EC-Copernicus HSP to AWS Cloud Migration (Heartstream)

- **Designed and developed 10+ scalable, repeatable software components** (RESTful APIs) using ASP.NET Core, C#, and GraphQL (HotChocolate) on open-source technologies; integrated AWS services (S3, DynamoDB, IAM, Kinesis) for enterprise-scale backend deployment, increasing system uptime and reliability.
- **Implemented role-based authorization (RBAC) and JWT security** in GraphQL queries using HotChocolate's [Authorize] policy; applied privilege-based access control ensuring software quality and functional accuracy across distributed microservices.
- **Built end-to-end firmware upload workflow** — component creation, versioning, distribution rules, blob upload, and presigned-URL completion — applying architectural and operational best practices for a scalable, cloud-agnostic solution.
- **Implemented Redis caching** for high-frequency API endpoints, reducing API response latency by 40% and improving overall system responsiveness.
- **Migrated PostgreSQL schemas and optimized queries using EF Core**, cutting database latency by 35%; applied structured logging (LoggerMessage partial methods) reducing debugging time by 50% and enhancing cloud observability.
- **Collaborated in agile ceremonies and cross-functional code reviews and design reviews** to ensure software quality and functional accuracy, accelerating release cycles by 25%; adhered to change and incident management standards throughout.

PROJECTS

End-to-End CI/CD Pipeline with Docker & AWS Deployment

GitHub Actions · Docker · AWS EC2 · Bash

- **Designed and built a complete CI/CD pipeline** using GitHub Actions meeting architectural and operational best practices — auto-triggers on push to build, tag, and push Docker images, reducing manual deployment effort to zero.
- **Automated production deployment to AWS EC2** via SSH key-based authentication and a custom deploy.sh script; resolved technical issues including port conflicts, YAML syntax errors, and Docker build failures — adhering to change and incident management standards.
- Configured Nginx as a reverse proxy on EC2 and applied security group rules for secure HTTP routing; implemented system capacity monitoring via structured log analysis.

Multi-Cloud Large File Upload System

.NET · Azure · GCP · AWS S3 · C#

- Engineered a high-performance backend service in C# (.NET) to upload 2GB+ files to Azure Blob, Google Cloud Storage, and AWS S3 using native cloud SDKs; implemented chunked upload, parallelism, and checksum validation — achieving reliable, secure, and repeatable large-file transfers.
- Applied the Factory Pattern for dynamic cloud provider selection at runtime, making the system extensible and cloud-agnostic — demonstrating knowledge of software design patterns and distributed data structures.

Energy Management System

ASP.NET Core · React.js · PostgreSQL · JWT

- Built CRUD APIs for plants, devices, metrics, and users using ASP.NET Core and EF Core; developed React.js dashboards and alert components for live energy monitoring, improving plant manager visibility and response time.
- Implemented JWT authentication and RBAC for secure multi-user access; achieved 95% test coverage through functional integration and regression testing using MSTest and Moq, with automated test scripts for repeatable validation — meeting architectural and operational requirements.

CERTIFICATIONS

AWS Certified Cloud Practitioner (CLF-C02)

Amazon Web Services

EDUCATION

B.Tech in Information Technology | B S Abdur Rahman Crescent Institute of Science and Technology
CGPA: 9.8 | Gold Medalist | Chennai, India

2020 – 2024
